

GAUTENG PROVINCE

HEALTH
REPUBLIC OF SOUTH AFRICA

INTERNAL MEMO

Enquiries: Ms Refilwe Mokgetle
Directorate: Health Programmes
Tel: 073 411 5922

**TO : MS NOMANTU NKOMO-RALEHOKO
MEC: HEALTH AND WELLNESS**

**FROM : MR LESIBA ARNOLD MALOTANA
: HEAD OF DEPARTMENT**

DATE : 29 AUGUST 2025

**SUBJECT : QUESTIONS POSED BY LEGISLATURE,
5HL167.**

QUESTION

It is my honour to notify you that two questions will be tabled by Member J B Bloom of the Democratic Alliance (DA), for your written reply.

With regard to malnutrition, will the MEC please indicate:

(i) what criteria are used to define malnutrition.

Response:

The following World Health Organization classification is used:

Acute malnutrition: Acute malnutrition (acute wasting) is a form of undernutrition. It is caused by a decrease in food consumption and/or illness. It is defined by the presence of bilateral pitting oedema or wasting (low mid-upper arm circumference [MUAC] or low weight-for-height /Length [WFH/L]).

Moderate acute malnutrition (MAM): MAM, or moderate wasting, is defined by a MUAC ≥ 11.5 cm and < 12.5 cm or a WFH ≥ -3 z-score and < -2 z-score (WHO standards) in children 6-59 months old.

(ii) what statistics are kept on malnutrition in Gauteng, and what breakdown is there for districts and the different health facilities.

SUBJECT : QUESTIONS POSED BY LEGISLATURE, 5HL167.

Response:

1. All admissions to Hospitals and cases seen at Clinics with Moderate Acute Malnutrition and Severe Acute Malnutrition and Obese and overweight.
2. All Discharges and deaths with Moderate Acute Malnutrition, and Severe Acute Malnutrition at Hospitals. All new cases seen at clinics and Hospitals are admitted to Therapeutic feeding programme until they have gained adequate weight and discharged.
3. The data elements are capture daily and submitted to central point Health Information at Facilities and to Districts and Province Monthly

(iii) what are the figures for malnutrition cases in Gauteng each year since 2018 to date (please give separately for each year);

Response:

Malnutrition in Gauteng	2018/19	2019/20	2020/21	2021/22	2022/23	2023/24	2024/25	2025/26 Q1
MAM incidence	7.7	0	1.7	3.5	3.8	4.0	4.0	0.8
SAM Incidence	1.6	1.5	1.7	1.6	1.9	2.5	2.2	1.7

(iv) how many malnutrition cases were identified at each hospital and clinic in 2024 (please give separately for each facility);

Response:

Please refer to Annexure A for malnutrition cases per Hospital and Annexure B for malnutrition cases per Clinic

(v) what trends can be detected in malnutrition cases;

Response:

The data elements on children under 5 with Malnutrition are analysed using District Health Information System. If a child dies the death is further analysed in a Mortality Meeting and all the factors that contributed to the death are analysed in a structured Mortality review forms used by the whole Province.

(vi) in all the figures given from (ii) to (v), what is the breakdown between child and adult cases?

Response:

The Department of Health is only collecting the breakdown of child malnutrition as reflected at (ii) and (iii)

SUBJECT : QUESTIONS POSED BY LEGISLATURE, 5HL167.

(vii) how many deaths have been identified from malnutrition in each year from 2018 to date (please give separately for each year)?

Response:

Malnutrition Death	2018/19	2019/20	2020/21	2021/22	2022/23	2023/24	2024/25	2025/26 Q1
SAM Deaths	105	94	75	121	129	94	100	24
MAM deaths	16	34	45	45	40	32	30	14

(viii) what is the estimated extent of undercounting for malnutrition and malnutrition deaths, respectively?

Response:

All children under five years attending the public health facility in the Department are classified of their nutritional status and death resulting thereof are reported to the DHIS

(viii) what are the identified causes of malnutrition and malnutrition deaths;

Response:

Most of the children seen with Malnutrition have underlying medical conditions which makes them not gain weight adequately. Most deaths from acute malnutrition are linked to infections such as diarrhea, pneumonia, tuberculosis and HIV/AIDS and they present late to health Facilities with complications such as Hypoglycemia, Hypothermia and Sepsis which make the prognosis poor.

(x) what measures are being taken to reduce malnutrition and malnutrition deaths?

Response:

At Community level:

- Community Mobilization or Outreach by Community Health workers.
- Promotion of breastfeeding, appropriate complementary feeding and micronutrient supplementation

At Primary Health Care level:

- Health Promoters and Professional Nurses give health education information on infant and young child feeding to educate on prevention of malnutrition. The nutritional status of all children under 5 years are classified using growth charts in the road to health booklet.
- Those with Malnutrition are identified and admitted on the Food and Micronutrient supplementation program and managed according to the Integrated Management of Childhood Illnesses (IMCI) Guidelines.

SUBJECT : QUESTIONS POSED BY LEGISLATURE, 5HL167.

- Education on the early commencement of Breastfeeding within an hour of delivery is
- done at health facilities to promote exclusive breastfeeding for the first 6 months of life.
- Supplementary Feeding Programme (SFP) and Outpatient Therapeutic Programme (OTP)

At Hospital level:

- Children with Severe Acute Malnutrition are admitted and managed according to the hospital Care Guidelines for Infants and Children, the WHO 10 Steps for management of Severe Acute Malnutrition and the underlying causes are investigated and managed appropriately.
- Inpatient Therapeutic Programme (ITP).

Submitted by:

MS REFILWE MOKGETLE

ACTING CHIEF DIRECTOR: HEALTH PROGRAMMES

DATE: 29.08.2025

Recommended /not recommended/ recommended with amendments.

DR MP SELEPE

ACTING COO: HEALTH

DATE: 01/09/2025

Supported/ not supported/ supported with amendments.

MR LESIBA ARNOLD MALOTANA

HEAD OF DEPARTMENT: HEALTH

DATE: 22/09/25

Approved / not approved/ approved with amendments.

MS NOMANTU NKOMO-RALEHOKO

MEC: HEALTH AND WELLNESS

DATE: 10/09/25
